

PHYSICAL INTELLIGENCE & ASSURANCE

See the real condition.
Anticipate what comes
next.
Act with confidence.

For critical operations, infrastructure and industrial
assets.

Critical sites already produce abundant data. The problem is that evidence is fragmented across people, fixed sensors, mobile instruments, robots, drones, operational systems and documents.

Quanteon turns those fragments into a living operational picture—and a governed path from evidence to action.

A living digital twin is time-aware, versioned and uncertainty-aware. Hybrid intelligence uses deterministic rules, probabilistic analysis and AI—while human authority remains explicit for high-consequence decisions.

ASSURED MISSION BASELINE

One asset group. One recurring route or mission. One operational decision.

10 working days • CHF 25,000 fixed • 60% upfront • No hardware purchase

Bring us the mission where better evidence would change a decision.

Robots are optional. Assurance is not.
